

## RECENT ACTIVITIES - CONSTRUCTION

In late February 2005, Emil Anderson Construction Inc. resumed construction to widen and straighten the highway east of the new Yoho Bridge. When completed in 2006, these improvements will mark the end of the project's first phase. Work on Phase 2, involving the replacement of the Park Bridge and upgrades to 4.5 km of highway, should begin before the end of 2005.

Following a post-blast inspection, blasted rock is removed.

The existing shoulder in this segment west of the Rafter's Pullout will become part of the travelled portion of the widened highway in the future.
